

VEHICLE SUPPORT PLATFORM

ABSTRACT OF THE DISCLOSURE

A vehicle support platform is provided. The vehicle support platform includes a vehicle support deck of generally rectangular shape attached to a support frame constructed of a plurality of frame members. A pair of ramps pivotally attached to opposite ends of the support frame. Four high strength caster wheels are attached to the support frame for supporting the entire weight of the vehicle support platform and a vehicle positioned on the support platform on a support surface, and to provide non-restricted movement of the support platform across the support surface. The support platform is constructed from a lightweight and strong material and is designed to be easily maneuvered while supporting a vehicle. The vehicle support platform can include a vehicle wheel engagement means for receiving a wheel of a vehicle and supporting the vehicle generally upright, can be folded into a compact storage position, can be used as a loading ramp and has a low profile height.
